

BATTERY CIGARETTE LIGHTER

THIS SIMPLE ARRANGEMENT UTILIZES TWO D-CELL BATTERIES JOINED TOGETHER WITH MASKING TAPE, OR CRATERED IN A SIMPLE CARDBOARD HOLDER, WITH TWO SMALL PIECES OF WIRE JOINED BY A SECTION OF HEATING ELEMENT COIL FROM A DESTROYED STOVE BOUGHT STINGER (IMMERSION HEATER), WITH ONE END OF THE WIRE TAPPED TO THE BASE OF ONE BATTERY (NEGATIVE END) AND THE OTHER LEFT LOOSE, TO BE TOUCHED TO THE POSITIVE TERMINAL OF THE OTHER WHEN A LIGHT FROM THE COIL IS NEEDED.
